## Notice No. 3

Orphan Well Association  
Operations in City of Calgary

September 18, 2017

### Lexin Orphan

**00/11-24-022-29W4/0**

Monday , September 18, 2017 – Slick line and other required equipment was brought onsite as planned. The sub surface valve (downhole safety valve) was opened and fresh water and methanol was pumped down the tubing to prevent any gas from the well from coming to surface. This is known as killing the well. Operations ran smoothly with no sour gas detected at surface. The sub surface valve was removed.

PLANS – The sub surface valve (downhole safety valve) will be removed, and two down hole plugs inside the tubing will be installed. This will allow the wellhead to be safely disconnected and replaced it with special equipment called Blowout Preventers or BOPs. This device allows the rig crew to work safely on the well.
